EDUCATION

VIT Bhopal University

Bachelor of Technology (B.Tech) - Computer Science Engineering

Bhopal, India

2023 – 2027 (Expected)

International Public School

X – 90.2

Bhopal, India

2020-2021

XII – PCM

2022-2023

EXPERIENCE

Prodigy InfoTech

Generative AI Engineer Intern

September 2025 – December 2025

Remote

- Engineered and deployed custom Agentic AI workflows using Python, automating complex problem-solving tasks and enhancing analytical efficiency.
- Designed advanced LLM prompt engineering strategies, optimizing generative AI models to deliver precise, data-driven outputs.
- Collaborated with cross-functional teams to integrate generative AI models into existing analytical pipelines, translating technical models into practical business intelligence solutions.

PROJECTS

Customer Churn Prediction | Python, SQL, Pandas, NumPy, Scikit-learn

[GitHub](#)

- Developed a comprehensive Machine Learning pipeline to predict customer churn, achieving high classification accuracy utilizing advanced Scikit-learn algorithms.
- Executed robust data preprocessing and feature engineering on complex datasets using Pandas and NumPy to uncover critical predictive variables.
- Conducted rigorous model evaluation applying precision, recall, and F1-scores, translating results into actionable, data-driven retention strategies.

Library Management System | ASP.NET Core MVC, C#, Entity Framework Core, SQLite

[GitHub](#)

- Architected a full-stack dashboard utilizing ASP.NET Core MVC and C#, streamlining inventory tracking and user management processes.
- Implemented robust role-based authorization and authentication protocols, ensuring secure access controls across the application ecosystem.
- Engineered efficient CRUD operations integrated with Entity Framework Core, with optimized SQLite schemas for rapid, reliable data retrieval.

MediChat – AI Healthcare Platform | Next.js, LangChain, LangGraph, RAG, Twilio

- Engineered an AI-powered healthcare platform combining a Next.js/Tailwind CSS web app with a WhatsApp-based symptom triage service via Twilio integration.
- Built Retrieval-Augmented Generation (RAG) pipelines using LangChain and LangGraph to power context-aware symptom analysis and conversational triage flows.
- Designed prescription upload, dashboard visualization, and an SOS emergency-escalation workflow, enabling structured health-record tracking and prioritization of urgent cases in real time.

TECHNICAL SKILLS

Languages: Python, Java, C#, SQL.

AI / Generative AI: LangChain, LangGraph, RAG, Prompt Engineering, Agentic AI Workflows, Scikit-learn

Frameworks & Libraries: ASP.NET Core MVC, Entity Framework Core, Next.js, Tailwind CSS, Pandas, NumPy

Cloud, Databases & Tools: AWS, SQLite, SQL Server, Git, GitHub, Twilio, Power BI, Excel, Visual Studio, VS Code

Core Subjects: Data Structures & Algorithms, OOP, DBMS, Machine Learning, Computer Networks, Distributed Computing, Data Analytics.

CERTIFICATIONS & ACHIEVEMENTS

- Achievements: TCS CodeVita Season 13 (Global Rank 1450, University Rank 10)
- Certifications: Google IT Support Professional Certificate, NPTEL Marketing Analytics, NPTEL Introduction to Machine Learning, MATLAB Professional, HackerRank Certifications
